

NORAD-Atomic-Data Access Summary by Month

Database Founder: Sultana N. Nahar

- This file contains statistics of the atomic data usage by users in every month.
- Access Summary Start date: October 2023
- The metric set-up for NORAD Access Summary was created by Matt Rendina (rendina.8@osu.edu), IT Multi-Discipline Senior Specialist of Astronomy Department.

The usage of data is presented in bar graphs.

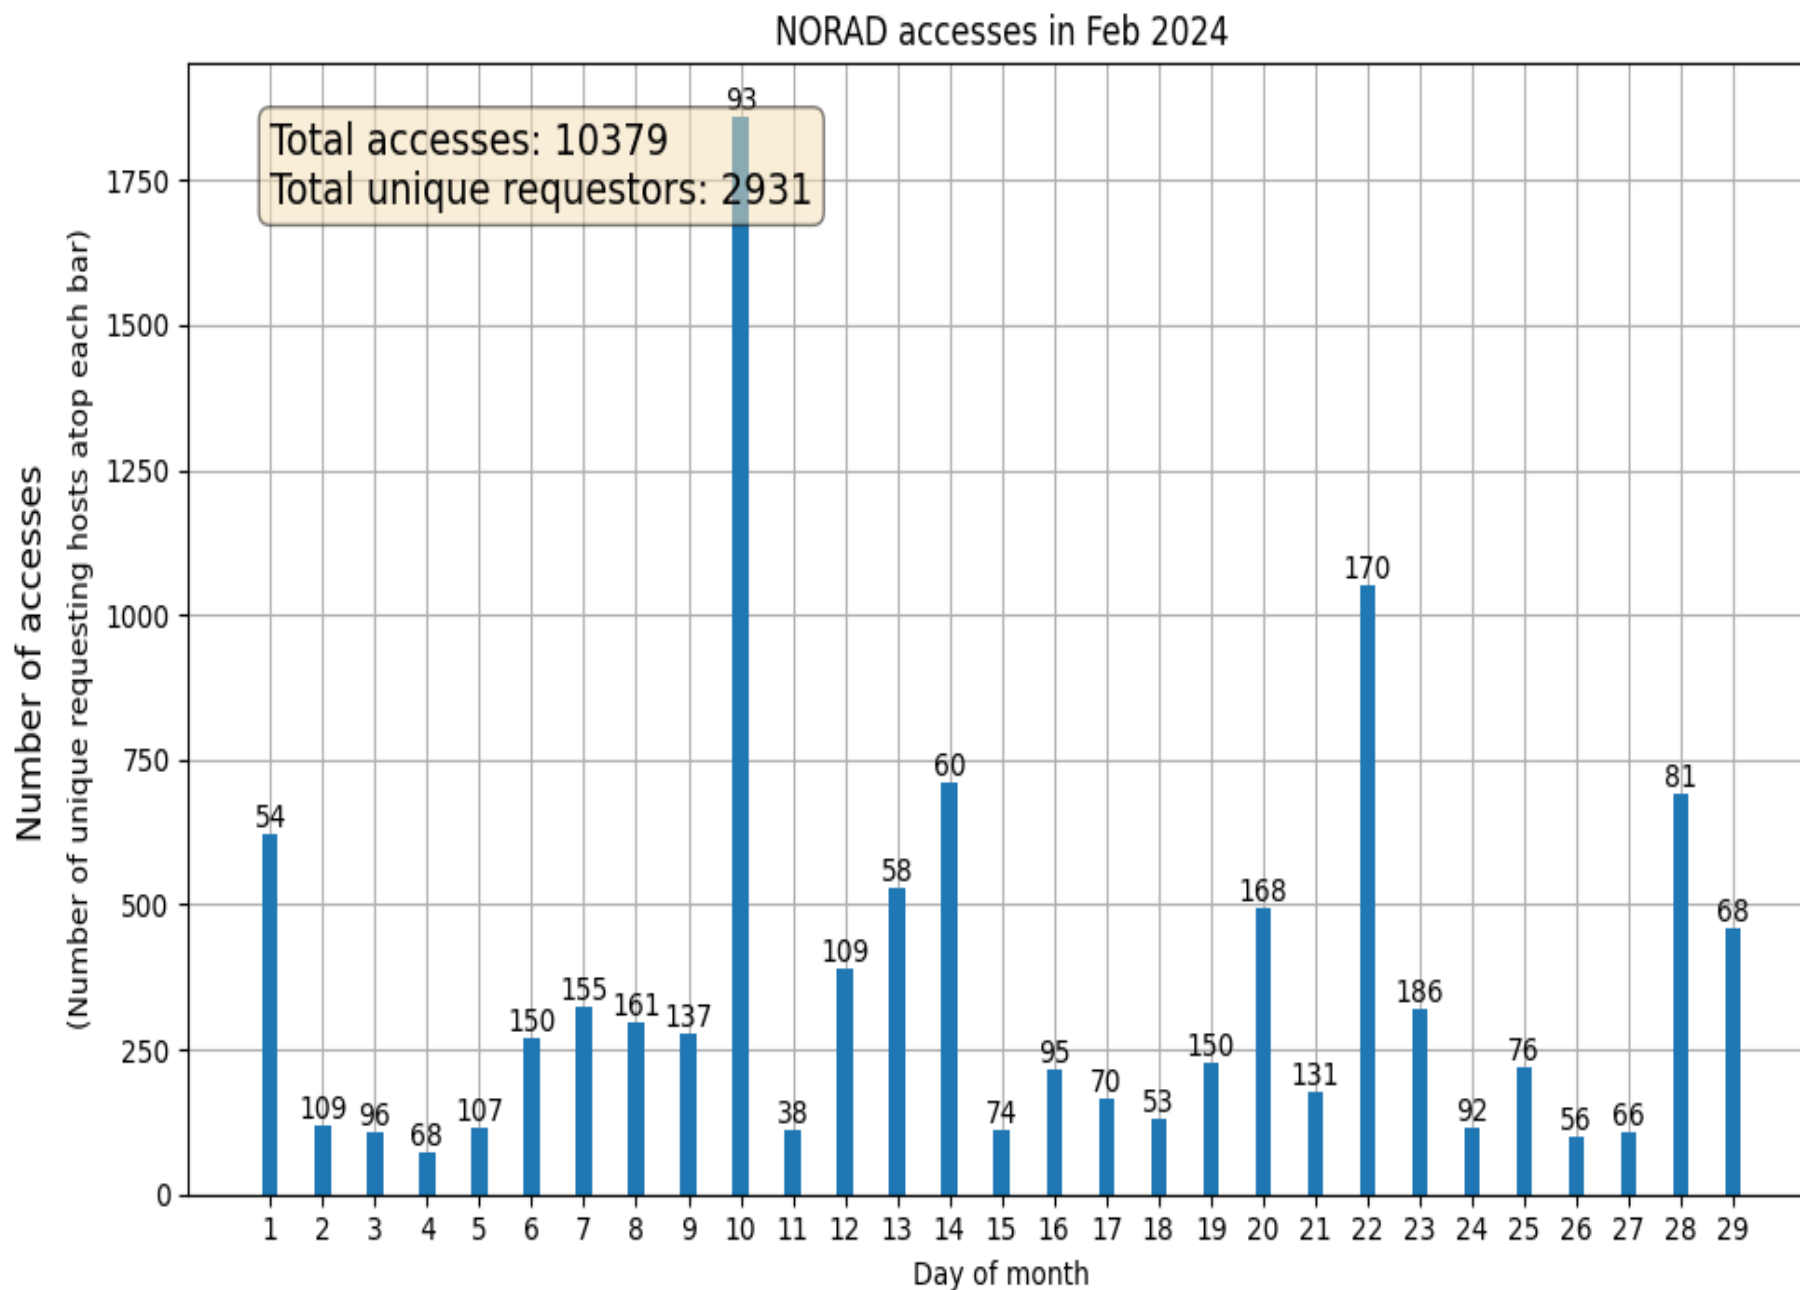

- The height of a bar gives the number of total access events for the site on the given day.
- The number at the top of the bar reflects how many unique remote hosts were involved in performing those accesses on that day

For example, if there were 100 total accesses of the site made on the first day of the month, but only 5 machines out on the internet were responsible for those accesses (implying that some or all of those remote machines made many such accesses), then the bar height would be 100 and the number atop the bar would be 5.

NORAD-Atomic-Data Access Summary: March 2024

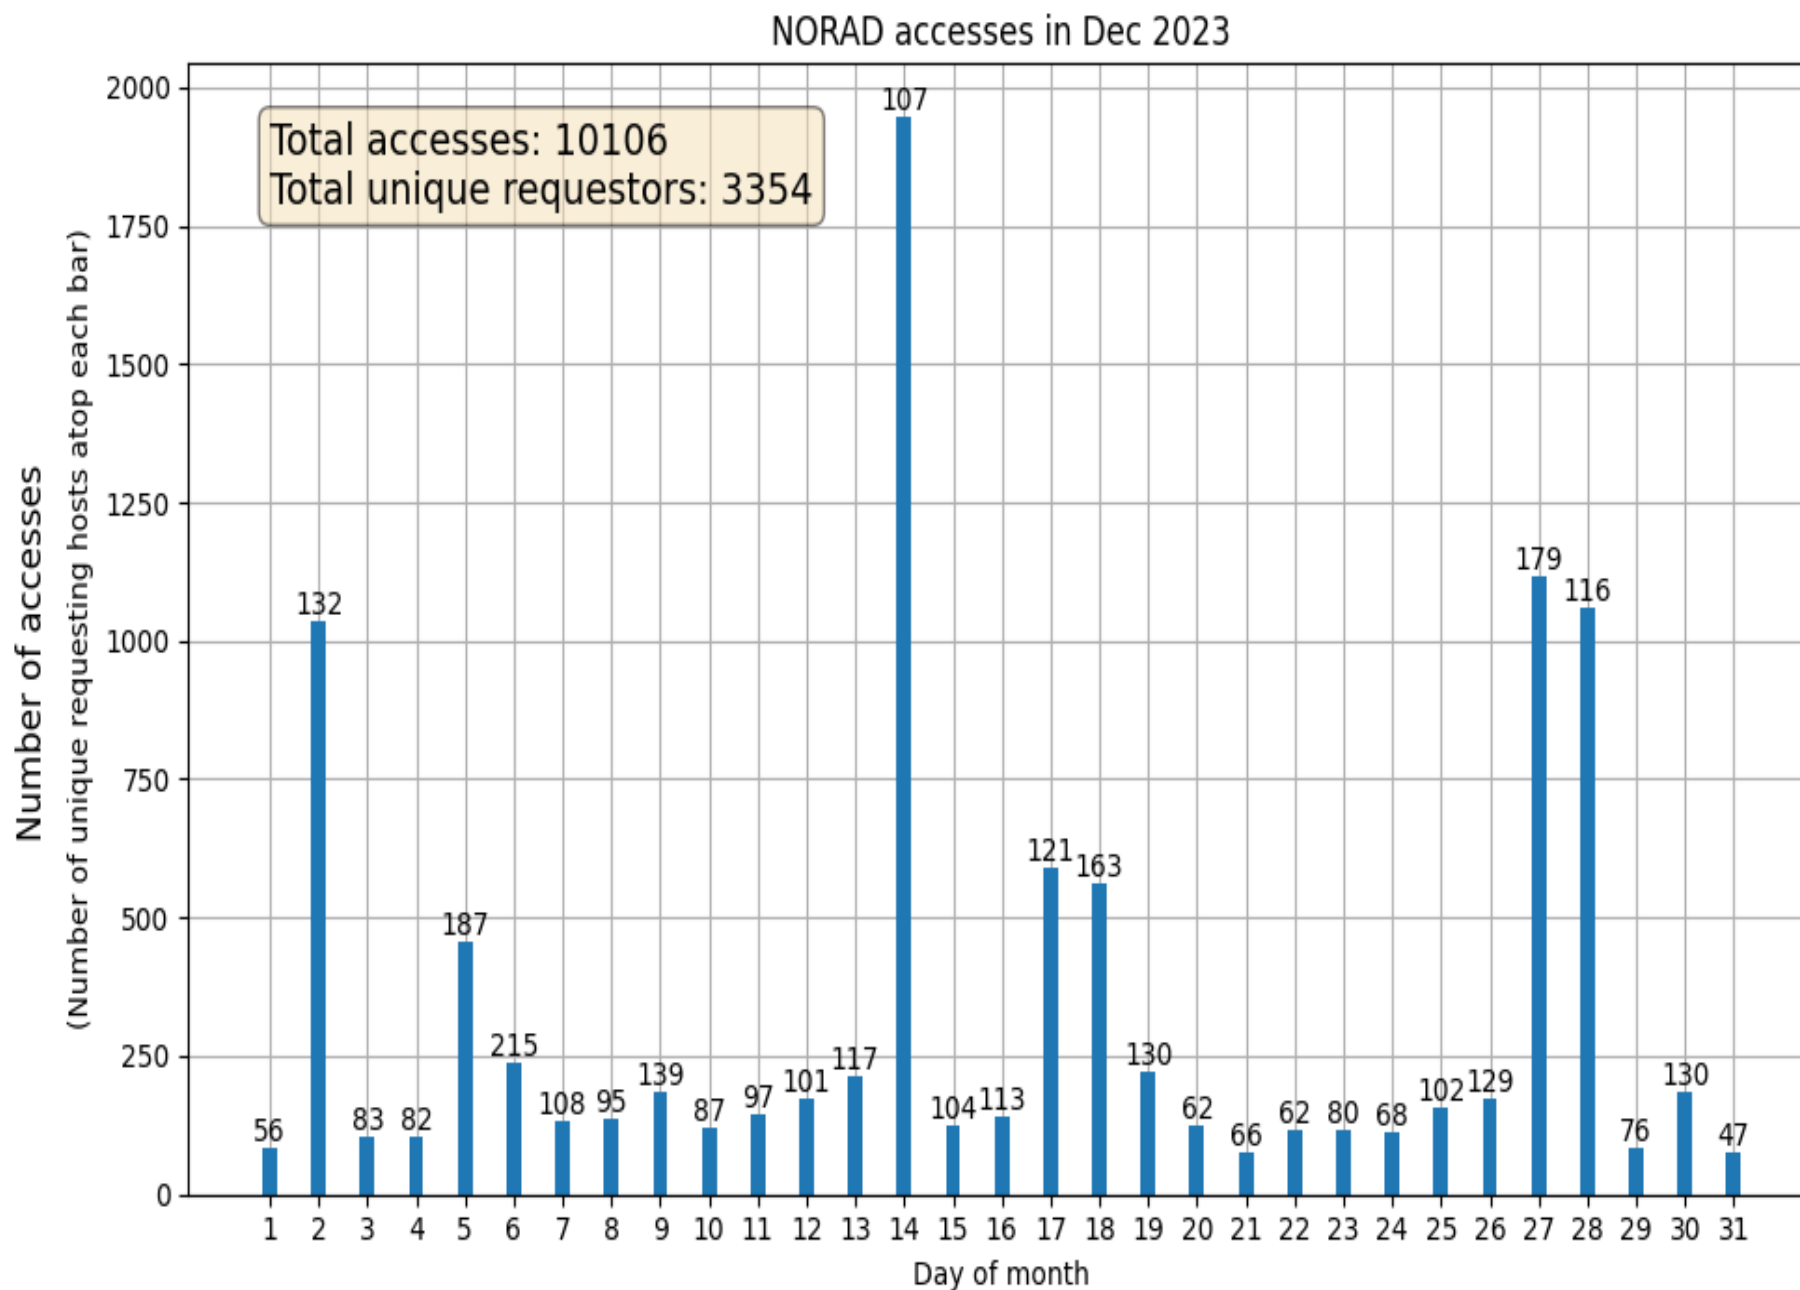

NORAD-Atomic-Data Access Summary: February 2024

NORAD-Atomic-Data Access Summary: January 2024

NORAD-Atomic-Data Access Summary: December 2023

NORAD-Atomic-Data Access Summary: October 2023
